Feedback for VTM for Poultry

“We were trialing your **Poultry VTM** and **DUA** when we were notified by the State that two birds infected with Avian Influenza had been brought to a home flock within 1/2 mile of us. Our 600 birds were quarantined to the farm until two rounds of testing two weeks apart could show that our birds were not infected. Finding a single infected chicken meant the State would depopulate the whole farm birds, followed by disinfection and 21 days waiting before new birds could return, followed by another round of testing the new birds. I used both of your products at the recommended rates, plus raw apple cider vinegar in the drinking water. A month later, our final testing showed no infected birds! What a relief.

I am certain that supporting the health of the chickens with a diet of organic feed, ranging on pasture, a splash of vinegar and your quality premix prevented our birds from getting infected. A flock between us and ground zero did get infected and another flock a mile and a half away got infected. I have now placed my order for more **Poultry VTM** and **DUA**.

Thank you for offering a fine set products and supporting organic agriculture.”

- E.L., Nebraska
