

# RIDE - RITE™ Electrolyte

**E**lectrolytes are essential to the body for normal function; it is important to maintain electrolyte balance. Sodium, chloride, potassium, calcium and magnesium are the primary electrolytes. Electrolyte deficiencies typically occur due to prolonged physical exertion. When your horse sweats, there is loss of water, and these primary electrolytes. It is important to provide your horse with electrolytes during warm weather and periods of extensive exercise. Diarrhea may also deplete electrolytes.

**We suggest RIDE-RITE™ Electrolyte to be used pre, during, and post strenuous work or competition where dehydration would be a concern.**

**With Vitamin B6:** Controls sodium to potassium levels in body fluids. If the sodium to potassium ratio is out of balance due to a B<sub>6</sub> deficiency, swelling of tissues in the legs will persist. Vitamin B<sub>6</sub> also increases the availability of iron, reducing the risk of anemia.

## RIDE-RITE ELECTROLYTE - 3 LB BUCKET

Item Number: A124 (24 doses)
